

Nucor Features & Benefits

Base Utilizing Concrete Notch

Features

1. Concrete notch gives firm foundation.
2. Concrete notch seals off panel tightly against rodents.
3. Concrete notch extends past panels and flashings giving some protection for the building.

Benefits

1. The erector can get positive support for the panel during erection.
2. The notch fits tightly against the panel.
3. By extending past the panel, the concrete prevents some damage.

What You Should Know

1. The notch does cost more for the overall project.
2. Panels must be held off the concrete to prevent corrosion. This is important in all areas.
3. If the concrete is uneven (both in and out or up and down), it is difficult to correct in the field.
4. Pay particular to any area that has masonry walls to make sure steel lines, concrete lines and the flashings that join them are coordinated.
5. Anchor bolt dimensions are shown from steel line. Concrete contractor must take this into account when setting bolts.
