

Nucor Features & Benefits

Optional Base Flash w/Trim

Features

1. Base trim comes in the color of the wall.
2. The two piece design allows for field adjustment.
3. The concrete details require minimum forming.

Benefits

1. Base trim matches the wall color. There is no decision to make concerning color.
2. Sometimes the concrete is not exactly level. A competent erector can adjust for uneven concrete.
3. Concrete notches require more material and labor to form in the field.

What You Should Know

1. There is no base inside closure unless you specify one in Box 28. The closure is really not necessary.
2. Better deliveries can usually be had by choosing colors for this and other items.
3. The base angle must be anchored to the concrete. This fastener is not by Nucor.
4. The detail is usually not a fit for the top of a masonry wall. When used on a masonry wall, coordination of disciplines must occur.
5. Wall panels should be held 1/8" off flashing to allow a siphon break. This is very important in coastal areas.
