

Nucor Features & Benefits

Standard Base Angle Flash

Features

1. Base angle flash is heavy 18 Gage.
2. Available in White or Burnished slate.
3. Base angle has a “Shelf Tab” to rest on foundation.

Benefits

1. Some erectors prefer heavier gage.
2. Color contrasts most selected wall colors.
3. “Shelf Tab” supports panel during erection.

What You Should Know

1. Colors are limited to White & BS. No special colors are available. Better deliveries can usually be had by choosing colors for this and other items.
2. There is no base inside closure unless you specify one in box 28. The closure is really not necessary.
3. The base flash must be anchored to the concrete. This fastener is not by Nucor.
4. The detail is usually not a fit for the top of a masonry wall. When used on a masonry wall, coordination of disciplines must occur.
5. Wall panels should be held 1/8” off flashing to allow a siphon break. This is very important in coastal areas.
6. Usually not the best choice if liner is used. An additional angle must be added to secure liner to foundation.
