a **NUCOR** company

LOCATION

Lafayette, LA

SIZE

9,000 sf

WALL SYSTEM

Nucor Classic Wall™

ROOF SYSTEM

Nucor VR16 II™ Vertical Rib

Cajun Field football stadium, located at the University of Louisiana at Lafayette, recently completed a major expansion to its stadium which was originally built in 1971.

Part of the expansion included the addition of two side by side concession buildings in the upper level of the south end zone. Two single slope Nucor pre-engineered buildings were used for the building's structure which was finished with a Nucor VR16 II™ vertical rib standing seam roof system.

The expansion of Cajun Field is part of the University's strategic plan to increase game attendance and boost the local economy.
