Brick on Studs

## ROOF SYSTEM

Nucor CFR™ Standing Seam

A multi-purpose building and indoor football practice facility, Highland Park High School is a 206' clear span with a clear peak height of 37'; and also includes a clear span lean-to. This building was erected over sub-grade soil, without concrete foundation.

A challenge in constructing this project was the adjacent buildings on the west and north side, leaving a mere 15' of space for construction.
