

Collinsville First Baptist Church

a **NUCOR** company

LOCATION

Collinsville, MS

SIZE

43,387 sf

WALL SYSTEM

Brick Veneer

ROOF SYSTEM

Nucor VR16 II™ Standing Seam

After their original location was destroyed by tornado, Collinsville First Baptist Church recently completed a new, more functional, building for their congregation.

This unique project consisted of four pre-engineered Nucor metal buildings attached to a structural steel building used for the center of the building. The structural steel portion of the building is 20,000 SF with a 135' clear span truss.

The facility includes a 650-seat auditorium, space for a 65 person choir, large student room with stage, classrooms, dedicated kid zone and amenity space.
