VR-16 on hipped entry area

Flint Ag & Turf, a John Deere distributor for over 40 years, has 8 full-service locations in southwest Georgia and is the leader in the market area with a full line of agricultural equipment and implements, including pecan harvesters, commercial scraper tractors and irrigation systems.

As part of their expansion, Flint Ag & Turf Division teamed with Nucor Authorized Builder, LRA Constructors, Inc. (LRA) as Design-Build Contractor for their new location at the Oakland Meadows Business Park in Leesburg, Georgia. The project consisted of site development of roughly 15 acres and building construction of a multi-level 78,017 SF sales/service building. The building includes a partial mezzanine and two 5-ton bridge cranes in the service area. The exterior uses HE40 insulated metal panels on the front two walls with Accent Wall panel on the remainder of the walls.
