Fort Rouge Glass (FRG) is a leader in custom glass services and products and has been serving the Winnipeg market for over 40 years. After outgrowing their existing facility, they recently embarked on the design of a new building location that would double their space.

The building was designed using a custom Nucor pre-engineered building to create a space that suited FRG's business needs while also reflecting their signature style. The 18,000 sq. ft. building includes a spacious showroom, office space on an upper mezzanine and production facility that is twice the size of their former location. The facility fittingly features a fresh-looking glass façade with several unique glass features incorporated inside the building. The two levels of office and show room space feature an eye-catching staircase along with beautiful glass wall panels and sliding doors. There is also a large fabrication and warehouse facility custom built to better service their customers' needs.
