

# Nourison Distribution Center

a **NUCOR** company

## LOCATION

Calhoun, GA

## SIZE

306,000 sf

## ROOF SYSTEM

Nucor CFR™ Standing Seam Roof

Nourison, the leading multi-category resource for flooring, built a new large pre-engineered metal building used for storage and distribution. The Nucor ClearBay™ bolted joist system supports a standing seam roof system. Both sidewalls and the front endwall are pre-cast concrete panels which include reveals. A two-story, 7,500 sf office complex is situated at the East side of the building. The shipping and receiving department features drive-in dock doors that accommodates large commercial tractor trailers.

In early 2014, construction commenced on an 132,000 sf expansion to house state-of-the-art machinery as well as advanced logistics, new office space and expanded shipping and receiving capabilities.
