Nucor CFR™ Standing Seam

Gourmet International is operated by second-generation owners and is one of the fastest growing direct import & specialty foods companies in North America. To support their continued growth and space requirements they recently built a custom facility to meet their immediate needs and give them room for the future.

The new 124,000 square foot custom metal building includes 16,000 square feet of office space. The building gives them much needed room for their warehouse, distribution and packaging operations, and features two refrigerated areas and one large freezer. The second level features a partial mezzanine with 12,000 square feet of executive office space, storage and an employee training area, with space to add offices for staff as the company grows. The entire building is temperature controlled and has an audio system throughout as well as extensive security monitoring and alarm systems. The exterior uses precast concrete panels and a Nucor CFR™ Roof system.
