Galvalume

BUILDING END-USE

Bonner Brewery

KettleHouse Brewery's new 40,000-square-foot facility serves as a production brewery on the scenic banks of the Blackfoot River near Missoula, Montana. With two other local taprooms, this new facility allows them to keep up with growing demand and increase production capacity.

The building was designed using a custom Nucor pre-engineered building and includes a partial mezzanine. The exterior of the building utilized R-Panel wall panels and a CFR™ Standing Seam roof system.
