## LOCATION

New Orleans, LA

## SIZE

14,500 sf

## WALL SYSTEM

Nucor Reverse Classic Wall™  
with EIFS and brick

## ROOF SYSTEM

Nucor CFR™ Standing Seam

Located in New Orleans, this development is the first Walgreens retail store in the U.S. ever built utilizing a pre-engineered metal building. This structure was designed with a single slope 105' x 138' Nucor pre-engineered building and provided an efficient and cost-effective solution typically desired in commercial construction.

The prototype design Walgreens is using in this market, included 14,500 square feet of space with a single-lane drive-through pharmacy window. Wimco is now implementing a number of similar facilities in various other areas.
