a **NUCOR** company

## LOCATION

West Kelowna, BC, Canada

## SIZE

9,000 sf

## WALL SYSTEM

Nucor Reverse-R

## ROOF SYSTEM

Nucor CFR™ Standing Seam

Frind Winery's new 9,000 square-foot building serves as a wine production facility, nestled along the lakeshore of Lake Okanagan. The new building allows the winery to be completely self sufficient in growing, processing and serving the public the fruits of their labor year round.

The facility was designed using a custom Nucor pre-engineered building tailored to fit several processing tanks and houses a partial mezzanine to overlook daily operations. The exterior of the building is clad with Nucor Reverse-R panels and a Nucor CFR Standing Seam roof system.
