## Recreation Facility Wins in *Metal Architecture's* 2023 Design Awards in the Metal Buildings Category

Congratulations to Authorized Builder, C&S Construction, of San Diego, CA on receiving [Metal Architecture's 2023 Design Awards](#) in the Metal Buildings category for their excellent project.

[3Roots Wellness Center](#) successfully replicates the surrounding collection of residential districts with modern architecture combining steel and stone in unique and natural ways, open floorplans that encourage togetherness, indoor/outdoor spaces that bring nature closer, and life rooted in health and happiness. C&S understood the aspirations and design objectives of the project and suggested requisitioning for an impressive two-story custom metal building system by Nucor.

This state-of-the-art gym and private clubhouse exclusively serve residents of the newly developed community. The wellness space and social hub have lounge areas, a business center, and swimming pools. A

a NUCOR company

gorgeous, full-height glass curtain wall accentuates the entrance and provides a lot of natural lighting, adding to the sustainable appeal. A 60' x 92' mezzanine is featured, leaving the rec center with extra square footage for amenities. A 50-foot Ficus tree grows through a circular roof opening of the metal building to infuse natural elements with the industrial aesthetic.

With their in-house design and construction resources, C&S can streamline the delivery of everything, from small renovations and additions to major reconstruction and large scale buildings from the ground up.
