

*December 2023*

Nucor Building Systems is constantly seeking ways to improve our product offering for our Builders. We are pleased to announce an improvement to the inside void closure of our Nucor CFR Standing Seam Roof System. In an effort to provide a more complete seal, avoid cracking, and aid in modularity, our standard inside void closure is changing from plastic to metal.

## Metal Closure Benefits

- A metal closure, rather than plastic, allows for fastening the trapezoidal panel shoulders to the closure, forming a more complete seal around the closure. This also prevents the closure from wanting to spin inside the trapezoidal profile.
- The metal closure eliminates the risk of the plastic closures cracking if overtightened when installed.
- The ability to put shoulder fasteners can also aid with panel modularity.

**Critical Dates:** The transition to metal void closures will begin as early as January for some projects. For more information, contact your local Sales Representative or Project Coordinator.

## **Our Commitment**

Nucor Building Systems is committed to ongoing improvements in all aspects of our business. This change is intended to enhance our product offerings and competitiveness in the marketplace. Your input and comments are always appreciated. If you have specific questions regarding this bulletin or any other area of our business, please contact your District Sales Manager or Project Coordinator.
