Nucor CFR
Galvalume

BUILDING END-USE

Gas Utility Meter/Service Facility

Summit Utilities is keeping its services local by opening the Maumelle Meter Shop - a place to restore, repair, and upgrade utility meters in the area. The almost 12,000 sf facility utilizes three single slopes and one lean-to, leaving space for the main building, office, covered storage, and mechanical area.

Both end walls use piggyback frame conditions, and the office end wall is expandable with increased snow loading for future warehouse space. The covered storage area has a partial length/height wall to hide stored material from view. Clerestory windows provide an abundance of natural lighting and the chosen panel colors and profiles match existing structures located on-site.
