## LOCATION

Easley, SC

## SIZE

55,620 sf

## WALL SYSTEM

A-Panel  
Pearl Gray/Slate Gray

## ROOF SYSTEM

Nucor CFR  
Regal White

## BUILDING END-USE

Athletic/Recreation

A YMCA requires expansive clear span space for multi-purpose rooms, gymnasiums, indoor tracks, and fitness centers. The Easley YMCA took full advantage of custom metal building solutions for their 55,620 sf facility in Easley, South Carolina. Five single slope structures provide space for an office and wellness area, a lobby, a gymnasium and gym track, and classrooms.

The gymnasium features a suspended walking track that uses nestled portal frames to create clearer space. Nucor A-Panels are installed vertically along the exterior, providing contrast against the horizontally placed panels and blue color blocking. Ultimately, the project's success depended on the custom metal building design that met all the requirements.
