

BUILT FOR WHAT'S NEXT.

When it comes to data centers, metal building systems aren't just a good option — they're the right one. Today's data centers demand more than four walls and a roof. They need smart design, room to grow, and infrastructure that keeps up with the technology inside. That's exactly what metal building systems deliver. From the ground up, these structures are engineered for flexibility — adapting to your floor plan, your cooling requirements, and your server density without compromise. Clear-span interiors eliminate interior columns entirely, giving you unobstructed space to design the layout that works best for your operation. Better airflow. More efficient cooling. Maximum uptime.

BENEFITS OF PARTNERING WITH NUCOR BUILDINGS GROUP

SPEED TO MARKET

Accelerated design, fabrication, and erection help you deploy operations faster.

DESIGN FLEXIBILITY

Wide clear spans and adaptable layouts support advanced cooling, cable management, and evolving server configurations. .

STRENGTH & SECURITY

Durable steel construction protects mission-critical assets and infrastructure.

BUILT FOR GROWTH

Our modular systems make expansion and upgrades fast and cost-efficient as technology and demand evolve.
