

Camden Township

a **NUCOR** company

LOCATION

Oberlin, OH

SIZE

10,000 sf

WALL SYSTEM

Insulated Metal Panel

ROOF SYSTEM

Insulated Metal Panel

BUILDING END-USE

Fire Department

After outgrowing its original facility, Camden township was in need of a modern, multi-functional fire station in Oberlin, Ohio, capable of housing apparatus, training space, administrative offices, and a community storm shelter — all within the budget constraints of a small municipality. The 10,000 sf facility uses a pre-engineered metal building system featuring a wide-span, column-free apparatus bay for large fire vehicles, a partial mezzanine, and an integrated office wing. A compound roofline combines gable symmetrical frames with three single slope structures, wrapped in a red and gray insulated metal panel envelope with a concrete block base.
